NUS  
**CITIES** Lecture Series

## The Art to Integrate Water for Climate Resilient Cities

What are the tools to make our cities more resilient, livable and regenerative? What sustainable perspectives and solutions do we have and can we offer today and for future generations? There is a need to be bolder and invent better environments for industrial sites, for a circular economy in production and for housing, mobility and living. A central focus is public space with water and green as the most affected elements, but also the possible medicine for cities and industrial sites as blue-green infrastructure, and finally for people.

How can Blue-Green Resilient Architecture become more mainstream? Learn more through a theoretical approach as well as practical examples from all around the world.

### Lecture by Herbert Dreiseitl Founder and CEO, Dreiseitl Consulting

Herbert Dreiseitl is an urban designer, landscape architect, water artist, interdisciplinary planner and Professor in Praxis. His focus is on creating Liveable Cities and Urban Landscapes around the world with a special hallmark on the inspiring and innovative use of water.
